Forest insect population dynamics

А.С. Исаев, Р.Г. Хлебопрос, В.В. Киселёв,
Ю.П. Кондаков, Л.В. Недорезов, В.Г. Суховольский

Популяционная динамика лесных насекомых

Contents ❖ Содержание

Preface to the first edition (1984)	4
Preface to the second edition (2001)	4
Preface to the English translation of the book (2009)	5
Chapter 1. Insect outbreaks in forest ecosystems	6
1.1. The functional significance of subsystems	6
1.2. The role of insects in the forest ecosystem	6
1.3. Mathematical analysis of complex systems: an approach based on examining phase portraits	7
1.4. The principle of stability of flexible ecological systems	11
Chapter 2. Models of insect population dynamics	13
2.1. The main approaches to modeling of population dynamics	13
2.2. Parametric models of population dynamics	14
2.3. Nonparametric models	16
2.4. Dynamics of an isolated population	18
2.5. Models of particular populations of forest insects	20
Chapter 3. Synthetic theory of population dynamics: a mathematical interpretation ..	23
3.1. Modifying and regulating factors	23
3.2. Delayed and direct regulation mechanisms	24
3.3. The phase portrait of the phytophage population (<i>the first approximation</i>)	27
Chapter 4. Phase portraits of forest insect outbreaks	32
4.1. Fixed outbreak	32
4.2. Sustained outbreak	33
4.3. Reverse outbreak	33
4.4. Outbreak proper	33
4.5. The phase portrait of the outbreak proper (<i>the second approximation</i>)	33
4.6. Numerical fluctuations in insect populations in narrow phase portraits	35
4.7. A review of insect classifications	38
4.9. Classification of insects based on their population dynamics	41
Chapter 5. Regulating mechanisms of forest insect population dynamics	45
5.1. The role of food in insect population dynamics	45
5.2. The role of natural enemies in population regulation	46
5.3. Analysis of the «phytophage – entomophage» model	48
5.4. The phase portrait of the outbreak proper in the (x,z) plane	49
5.5. The boomerang effect caused by artificial reduction in the densities of the interacting populations	50
5.6. The boomerang effect caused by an increase in entomophage abundance	51

Chapter 6. Insect outbreaks as second-order phase transitions	54
6.1. Metamodels of phase transitions for describing critical events in complex systems	54
6.2. A model of outbreak as second-order phase transition	54
Chapter 7. The effect of climatic factors on the development of insect outbreaks	58
7.1. Weather and forest insect outbreaks	58
7.2. The necessary and sufficient weather conditions for the development of forest insect outbreaks	59
7.3. Modifying factors in model population dynamics	62
7.4. The effect of modifying factors on the development of an outbreak	63
Chapter 8. Indifferent insect species	65
Chapter 9. Population dynamics of prodromal internally feeding insect species	67
9.1. The Asian larch bark beetle (<i>Ips subelongatus</i> Motsch.)	67
9.2. The role of food plants in regulation of insect populations	68
9.3. The effect of intra-population regulating mechanisms	69
9.4. The role of natural enemies	71
Chapter 10. Prodromal internally feeding insect species	72
10.1. Insects affecting buds and shoots	72
10.2. Insects affecting cones	72
10.3. Gall makers	73
10.4. Miners	75
10.5. Xylophagous insects	76
10.6. Ecological niche and significance of the qualitative composition of food	79
10.7. Interaction with parasites and predators	80
Chapter 11. Eruptive internally feeding insect species	83
11.1. The black fir sawyer (<i>Monochamus urussovi</i> Fisch.)	83
11.2. Development of the fixed outbreak of the black fir sawyer	84
Chapter 12. Prodromal externally feeding insect species	89
Chapter 13. Eruptive externally feeding insect species	92
13.1. Intra-population regulating mechanisms	92
13.2. Regulating mechanisms of the ecosystem	95
13.3. Phase portraits of outbreaks of phyllophagous insects	97
13.4. Outbreak proper: the Siberian silk moth (<i>Dendrolimus superans sibiricus</i> Tschetv.)	97
13.5. Outbreak proper: the pine looper (<i>Bupalus piniarius</i> L.)	101
13.6. Sustained outbreak: the larch budmoths <i>Zeiraphera griseana</i> Hbn. and <i>Z. diniana</i> Gn.	104
Conclusion	107
